Professional summary

Software Engineer with 5+ years in scalable backend development using PHP (Laravel) and cloud technologies (AWS). Expert in designing secure RESTful APIs and modernizing legacy systems, leading to 30% reduction in technical debt and 25% improved application performance. Skilled in microservices and Agile delivery across international teams.

Education

ESTÁCIO DE SÁ

Bachelor of Science in Computer Science

2019 - 2023

Experience

SYMPPLICITY

Remote

Software Engineer

Nov 2022 - Mar 2026

- Structured, developed, and implemented internal web applications and RESTful APIs using PHP and MySQL, contributing to system scalability, security, and long-term maintainability.
- Led modernization initiatives on legacy PHP systems, refactoring critical code paths, upgrading PHP versions, and improving code quality to reduce technical debt and increase platform reliability.
- Planned and architected REST APIs integrating internal services and third-party systems, ensuring clear API contracts, consistent data flow, and predictable behavior across distributed components.
- Improved application stability and performance by supporting unit testing (PHPUnit), monitoring production issues, and proposing targeted optimizations based on real-world usage patterns.
- Authored and maintained technical documentation covering system architecture, business rules, and development workflows, supporting onboarding and knowledge sharing across engineering teams.
- Mentored interns and junior engineers in PHP, object-oriented programming, and internal platform architecture, and contributed as a technical interviewer for backend and full-stack roles, assessing code quality, architectural thinking, and problem-solving skills.

AMIROM EXPRESS

Remote

Software Engineer

Aug 2025 - Jan 2026

- Architected and delivered an end-to-end international logistics SaaS platform using a scalable microservices architecture, supporting real-time operations, multi-tenancy, and role-based access control (RBAC).
- Owned architectural decisions and managed the full-stack development of a high-performance web application with Next.js 14 (SSR), React 18, TypeScript, and Node.js, ensuring optimal SEO, scalability, and production-grade security.
- Acted as technical reference for core platform features, influencing architectural patterns, data modeling decisions, and security standards across the system.
- Engineered and optimized complex relational databases (MySQL + Sequelize), resolving N+1 query issues and implementing strategic indexing, reducing dashboard load time from 3.2s to 0.8s.

- Executed enterprise-level security standards, including JWT authentication with HTTP-only cookies, 2FA, CSRF protection, account lockout mechanisms, and OWASP-aligned best practices.
- Built real-time dashboards and analytics processing 10,000+ shipment records with sub-second performance, enabling operational visibility through dynamic charts, KPIs, and advanced filtering.
- Achieved measurable business impact, supporting 1,000+ monthly international shipments, reducing manual data entry by 70%, and enabling partner expansion via white-label, multi-stakeholder data isolation.

AFILIO

Rio de Janeiro

Software Engineer

Jun 2020 - Jul 2022

- Led the modernization of a core ERP platform by rebuilding the frontend with Vue.js and Quasar, and integrating PHP Laravel APIs within a microservices architecture, significantly enhancing usability, performance, and scalability.
- Designed and enhanced backend services in PHP Laravel, introducing new features, resolving production issues, and managing data persistence with MySQL and MongoDB in Dockerized environments.
- Managed multi-environment deployments across development, staging, and production using AWS, Linux CLI, and Git for version control, ensuring reliable releases, environment consistency, and operational efficiency.
- Promoted to Software Development Engineer in recognition of increased scope and impact, working within Agile (Scrum/Kanban) teams to ensure consistent delivery and cross-functional alignment.

Skills

Technical: NodeJS, PHP, Laravel, JavaScript, TypeScript, React, Next.js, Vue.Js, Sequelize, MySQL, MongoDB, Docker, AWS, Git, CI CD, REST APIs, JWT, PHPUnit, Microservices, Server Side Rendering, Database Optimization, Schema Design, Agile, TDD, Gitlab, Gitlab CI, Linux, OpenAPI, Winston, Zustand, TailwindCSS, Remote, SQL, SaaS, Version Control, AI Tools, Documentation, HTML, JSON, Jira, jQuery, Kanban, Scrum, Mentoring, NoSQL, Unit Testing
